Title: CoHasna

Selected Domain: Health care { Covid-19 } Idea: Creation of a website which acts as an interactive platform for various purposes to fight Covid-19.

Problem statement: 2020-2021 has witnessed some very strange happenings around us . Which was majorly contributed by the outbreak of covid-19. During this period we have witnessed many patients who could not combat against this virus due to various reasons. Among which major cause were lack of availability of blood plasma of COVID-19 cured patients, loss of will power and lack of proper health support awareness.

Brief description:

- 1.The main point in the website is we give an option to request or accept an emergency case in which people who require urgent blood plasma of corona cured patients can request. Those who are willing to give can accept. {We see many Instagram stories and WhatsApp status for asking help for blood plasma, so we thought of why not to make a common platform}. The same procedure is followed where the requisite gives all the necessary details, if by that time in near by vicinity, if its available anywhere people can help.
- 2.An option in which cured patients can give there suggestions here. We are seeing people are dying now due to fear and loss of will power. These feedbacks from cured patients will boost their will power and mental strength, which directly improves their health.
- 3.We see in advertisements about corona warriors and various associations working, we also provide separate space in our platform where people join together to improve the collective work. If people wish to help them they can donate , to their interested association.
- 4.Although vaccines for covid19 is available for free of cost in most of the hospitals people are hindering to take it. More awareness is required regarding this and the percentage of people taking the vaccine should improve. A separate platform will be placed in the website purely to the vaccine details.
5. In case the project is taken to the next level, we will ask the private hospital owners and if possible the government hospital administrators to link their fraternity to our application through an email so that in case of any emergency of plasma this app can notify their hospital or in case if the hospital wants it then the cured patients can get a notification about the same cause. In addition to that, it would be helpful for people who are searching for hospitals which has empty beds, this app serves this purpose spot on as real time data of number of ICU beds available will be displayed in our website.

CoHasna 😊

Lets all smile together

Mind+ve >>>>> Covid+ve
